

DINNER, DECIDED.

From fridge photo to dinner plan.

*Open the fridge. Take a photo. Get a plan you
actually want to cook.*

< 60 seconds
FRIDGE TO DINNER IDEA

THE NIGHTLY PROBLEM

It's 5:47 p.m. The hardest part of dinner isn't the cooking. It's the deciding. You stand in front of the open fridge, scroll saved recipes, give up, order takeout. **DinnerTime takes that loop off your plate** — entirely. Snap a photo of what's on hand and the app figures out what you have, what you could make tonight, what's missing if you want to plan the week, and how to actually cook it without holding your phone with greasy fingers.

RECIPES YOU'LL HUNT FOR

Hands-free

VOICE-GUIDED COOKING

WHAT IT DOES FOR YOU

PANTRY SCAN

Photograph the fridge.
The app reads what's there.

SOMETHING NEW

Tonight's dinner ideas,
matched to what you have.

MEAL PLAN

Drag dinners onto a
calendar.
Plan one night or seven.

SHOPPING LIST

Only what you don't own.
Sent to Notes or Messages.

Cooking mode

Hands-free guided cooking with voice readback, timers, and ask-anything (“can I sub butter for olive oil?”).

Your hands stay on the knife and the pan.

Recipe Box

Every recipe you cook (or heart) is saved. One tap to make it again.

The keepers stick. The flops don’t come back uninvited.

Remix

Tap any recipe; get three creative variations — lighter, vegetarian, faster, swap protein.

When the saved recipe is almost right, you don’t start over.

UNDER THE HOOD

DinnerTime is built on **Anthropic’s Claude** — the same frontier AI behind some of the most advanced products being shipped today. Vision, planning, recipe-writing, and the conversational cooking assistant all run on the latest Claude models. **Google Gemini** generates dish photography on demand. Every photo, suggestion, and timer is purpose-built AI — not a generic recipe database.

THE TIME YOU GET BACK

Most home cooks spend **20–40 minutes a day** on the “what’s for dinner?” decision loop, plus 30+ minutes a week building grocery lists that don’t quite match what they end up cooking. Multiplied across a year, that’s well over **200 hours** of mental tax. DinnerTime collapses it into seconds.

BEFORE

Open fridge → check three apps → scroll Pinterest → compare ingredients → realize you’re missing two things → give up → order takeout.

WITH DINNERTIME

Open fridge → one photo → pick a dinner you actually want → cook it.

YOU’RE ON THE BETA LIST

DinnerTime is in **private beta on Apple TestFlight**. You’ve already been added as a tester — here’s how to get the app on your iPhone in under three minutes.

1

Install TestFlight

On your iPhone, open the App Store and search for **TestFlight** — Apple’s official beta-testing app. Tap Get and install it. Sign in with the same Apple ID Patrick added to the team.

2

Watch for the email invite

You'll get an email from **Apple TestFlight** with the subject "Patrick Richards has invited you to test DinnerTime." Open it on your iPhone and tap **View in TestFlight**.

3

Accept and install

TestFlight will open and show DinnerTime. Tap **Accept**, then **Install**. The app downloads to your home screen with a small orange dot beside its name — TestFlight's way of saying "this is a beta build."

4

Open it and sign in

Tap DinnerTime on your home screen. Create an account with email or use Sign in with Apple. From there: take a photo of your fridge, and let it cook.

ONE THING TO KNOW

Beta builds update often. When a new version is ready, you'll see a **blue dot** in TestFlight — open the app and tap **Update**. If anything ever feels off, just shake your phone (literally) — TestFlight has a built-in "send feedback" gesture.
